

Power transformation with custom project support with ConnectWise Assist Tech Advantage

IT for business is transforming at a blistering pace – from hybrid environments to SaaS. End clients need your support but developing expertise for these evolutionary one-time client requirements simply does not scale. We can help you harness the opportunities presented by this change – with ConnectWise Assist Tech Advantage. With our breadth of seasoned experts, there are close to 100 project options to choose from including support for Microsoft Azure, Active Directory, VMWare, Office365, and more.

“The projects we’ve done with Tech Advantage are always executed 100% perfectly. The product is well structured and documented with excellent results. That’s an important way to augment the quality we provide our clients. We can leverage ConnectWise to perform more projects than we’d be able to with our own staff – sometimes as many as five at a time.”

—MICHAEL BUCKNER,
PC Power Center

Key Benefits

Get the expertise you need

Our teams have the hands-on technical experience and capabilities to remove roadblocks to service expansion.

Monetize transformation

Secure high value, custom projects across multi-infrastructure technologies as clients move workloads into new environments.

Magnify customer loyalty

Execute on unique project requirements efficiently and reinforce long-term customer relationships.

Bridge to new revenue streams

Capture post-project management services and expanded monthly recurring revenue.
